

Another First-Class Contract Delivered for MTR Elizabeth line: The Taplow Station Refurbishment is Complete

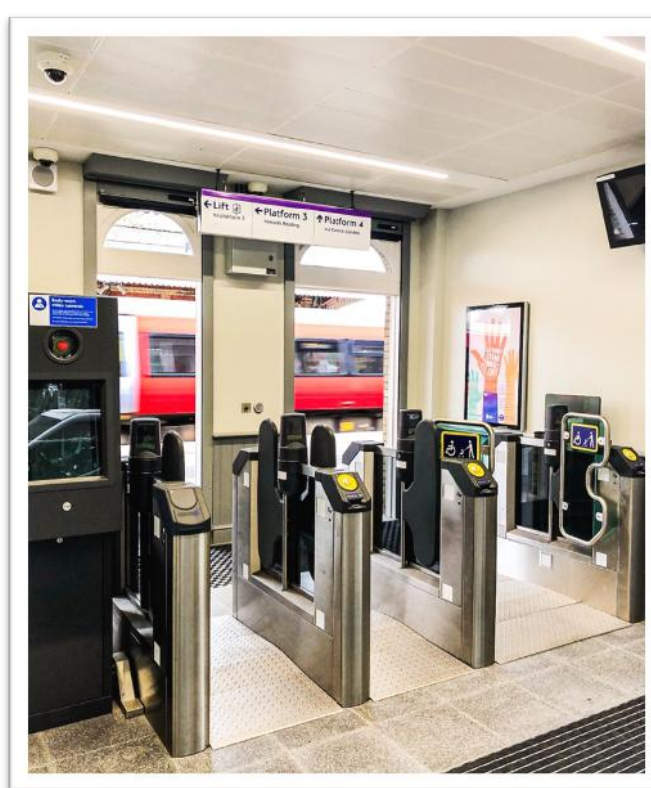

Capel C.S Ltd is pleased to announce that works for Taplow's Rail Station for MTR Elizabeth line are now complete. Having successfully delivered previous contracts for the Langley and West Drayton stations for MTR in the last couple of years, the construction contractors were awarded their third major contract for the Elizabeth line on behalf of TfL for the refurbishment and remodelling of Taplow earlier this year.

Another Milestone Reached

Taplow in Buckinghamshire sits on the Western section of the Elizabeth line, where up to 4 Elizabeth line trains will run in each direction every hour for passengers to go into central London without having to change trains once the full route opens.

The station underwent a complete refurbishment both internally and externally. Capel were contracted for the refurbishment and remodelling of the Ticket Office, Booking Hall and Station Entrance, a new Southern Entrance, staff facility room, revamped public toilets, a brand new MTR store room and the provision for a Tenancy unit, with an electrical upgrade throughout.

“Capel C.S have been a great supplier and team to work alongside with during this project. Works were completed on-time and delivered at the highest of quality.” Loui Harris, Project Manager at MTR Elizabeth line.

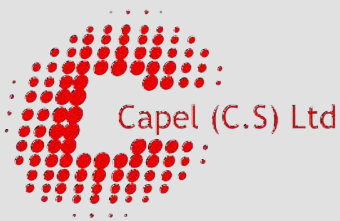

The refurbishment works also included external station and platform works, with the addition of a brand-new southern entrance with step-free access. To ensure the station was fully accessible to the public and operational during the refurb, enabling works provisioned a temporary Ticket Office, a staff room and temporary public toilets.

Jon Shepherd, Chartered Contracts Manager who worked on the project says, *“A great and very rewarding project for us all involved at Capel C.S. We hope the passengers using the station along with MTR Elizabeth line’s staff will enjoy the new facilities for years to come. It looks absolutely brilliant!”*

Enhancing Every-Day Life & Security

To further improve passengers’ experience, the interior was designed to give a clutter free and unified look throughout, with a larger Booking Hall for passengers during peak times. This included works on the existing station entrance and building the additional entrance, whilst incorporating

air conditioning in the ticket office area and a new MVHR system to provide good ventilation to the space. And to maximise safety and security to the public, the Booking Hall received new roller shutters and a brand-new CCTV system throughout, with a brand-new LED Lighting system within the new suspended ceiling system.

Capel C.S Ltd were pleased to be working on another project for MTR Elizabeth line, enabling their contribution to the UK's rail infrastructure to expand and grow rail capacity across the nation.

Once fully open, the Elizabeth line will link 41 stations across 62 miles of track, increasing central London's rail capacity by 10%.
