

THIS WEEK IS #RAILSAFETYWEEK! LET'S PROMOTE BUILDING SAFETY TOGETHER.

This week is **#RailSafetyWeek!**

A week dedicated to **raise awareness around Railway Health and Safety** for all, including daily commuters, workers, tourists and more.

The yearly event aims to promote rail safety to help **prevent accidents, injuries and fatalities** in and around the rail infrastructure.

The UK's railway network is already one of the best and safest in the world, offering high quality facilities and committed to the health and safety of all. There are over 28 major train operators and more than **24,000 trains run daily in the UK**, being the biggest mode of transport used in the nation.

There's also the ORR (Office of Rail and Road), who protect rail and road users in the UK with a range of monitoring and regulatory programmes for the entire mainline rail network in Britain, including London Underground, light rail, trams and more.

Earlier this year, the ORR announced their annual statistics showing a **decrease of 33.5% in accidents, fatalities and injuries**

to passengers and workers in 2020-21 in comparison to the previous year.

At Capel, we have always **prioritised the Health & Safety** of our workers throughout our projects as well as the public where they may be affected during any of our construction works.

During some of our rail stations refurbishment projects, we **ensure facilities and step-free entrances remain accessible**, as well as ensure passengers and commuters are alert of any construction works going.

Through-out some of our refurb projects we have also modernised **electrical systems in stations**, implementing new CCTV systems for **added security**, upgrading lighting systems such as LED lighting and emergency lighting. We also ensure all facilities including waiting rooms, WCs and staff rooms are **designed for maximum comfort, quality and durability**.

We believe in the importance of providing high quality facilities for all commuters and travellers to **encourage the use of public transport**.

By actively encouraging more use of rail, we can help people make more **environmentally-conscious choices in their daily lives**.

When it comes to working with our employees, we carry industry-related **accreditations**, such as our **RISQS certification** which ensures we **meet specific standards** that allow us to work within Railway. We also follow a **daily routine of various on-site H&S protocols and audits** that get reviewed monthly.

Primarily, we are advocates of encouraging **health & safety for everyone within Rail**, and do all our work with our employees and the public at the core of our values.

Capel C.S are honoured to be working with the UK's leading TOCs, being a part of iconic projects in the last few years including the **Elizabeth line**, Grade II Heritage building refurbishments with **Greater Anglia**, and we look forward to continuing our contributions to our nation's rail network.

Let's keep alert, attentive and safe together. Enjoy the ride!
